

WHAT I CLAIM IS:

1. A container for consumable products, comprising:
front and back sheets of flexible material disposed atop one another, said sheets having four sides,
a first seal formed at three adjacent sides of said sheets to create a first compartment between said sheets,
engageable fasteners disposed parallel to the fourth side of each of said sheets, said fasteners facing one another and operatively cooperating to form a resealable closure at the fourth side of the first compartment,
said sealed sheets being folded such that the periphery of the side opposite the fourth side is disposed adjacent to and parallel with the periphery of said fourth side,
a second seal formed at the periphery of the folded sheets to form a second compartment, and
a third seal formed inwardly of the second seal and spaced outwardly of the first seal, said third seal being a perforated seal that enables detachment of a strip of material disposed between said periphery of said sheets and the third seal.
2. The container of claim 1, wherein said sheets are folded about an imaginary line located midway between the fourth side and the side opposite the fourth side.
3. The container of claim 1 wherein said fasteners are complementarily configured for engagement and disengagement, and said front and back sheets of flexible material comprise a plastic material.
4. The container of claim 3, wherein said fastener elements are configured as "zip-lock" fastener elements.
5. The container of claim 1 wherein said first seal is spaced inwardly from the periphery of said sheets.

6. The container of claim 5, wherein said complementary consumable goods are edible.
7. The container of claim 5, wherein said consumable goods are baby changing goods.
8. A process of making a container, comprising:
 - providing first and second sheets of material,
 - securing a male fastener on a surface of said first sheet of material,
 - securing a female fastener on a surface of said second sheet of material, said female fastener being configured to releasably engage said male fastener,
 - disposing said sheets so that said surfaces of said first and second sheets face, and are spaced from, one another,
 - aligning said sheets such that the fasteners are in registry with one another,
 - securing said sheets together with a first seal to form an enclosure closed on at least three sides, said fastener elements registering, and being engagable, with each other,
 - disposing a first product in said enclosure,
 - engaging said fastener elements to seal said enclosure on said fourth side,
 - folding said enclosure upon itself so that the free ends portions of the folded enclosure overly one another,
 - disposing a second product between the free end portions, and
 - securing said free end portions about the periphery thereof with a breakable seal, said breakable seal being disposed outside of said first seal and enclosing said second product.
9. The process of claim 8, wherein said step of securing said free end portions about the periphery with a breakable seal includes the step of forming a perforated temporary seal along a seal path that extends parallel to free end of said periphery.

10. A diaper changing kit, comprising:
a container having two enclosures, each said enclosure including its own closure,
one of said enclosures being contained within the other of said enclosures,
said one enclosure containing a diaper, and
said other of said enclosures containing baby changing accessories.
11. The diaper changing kit of claim 10, wherein said container includes a releasable strip of material arranged about the periphery of said other of said enclosures, whereby when said strip of material is released, access to said one enclosure can be obtained.
12. The diaper changing kit of claim 10, wherein both of said enclosures are formed from a single piece of material.
13. The diaper changing kit of claim 11, wherein both of said enclosures are formed from a single piece of material.
14. The diaper changing kit of claim 11, wherein said one enclosure is arranged internally of said other enclosure.
15. The diaper changing kit of claim 11, wherein said baby changing accessories comprise one or more of a medicinal ointment, wiping materials, talc, and lotion.
16. A package for consumable products, comprising:
an enclosure having a top, a bottom and opposing side portions, the enclosure containing one or more items chosen from a first set of consumable products,
a first seal disposed about, and spaced inwardly from the periphery of, three adjacent side portions of the enclosure,
a resealable closure adjacent to the fourth side of the enclosure,
said enclosure being folded so that the periphery of the fourth side is disposed adjacent to and parallel with the periphery of the side opposite to the fourth side,

a second seal formed at the periphery of the folded sheets to form a second compartment of a size sufficient to house one or more items chosen from a second set of consumable products, and

a third seal formed inwardly of the second seal and spaced outwardly of the first seal, said third seal being a perforated seal that enables detachment of a strip of material disposed between said periphery of said sheets and the third seal.

17. The package of claim 16, wherein said second compartment is enclosed within said first compartment.

18. The package of claim 16, wherein said first and second sets of consumable goods comprise edible items.

19. The package of claim 16, wherein said first and second sets of consumable goods comprise diaper changing items.

20. The package of claim 16, wherein said first and second sets of consumable goods comprise first aid items.
